Retinal Diseases: Mechanisms, Diagnosis and Treatments

Message from the Guest Editors

In recent years, we have faced huge improvements and tremendous challenges regarding both medical and surgical approaches in several retinal diseases. Genetic treatments have already been employed in patients with inherited retinal disorders (IRD). These developments have opened a promising pathway for new research in gene editing for managing retinitis pigmentosa (RP), Stargardt disease, Leber congenital amaurosis (LCA), cone rod dystrophy, and so on. Retinal diagnosis higher speed scanning systems provide us with impressive opportunities to understand the mechanisms of the diseases of interest. The surgical treatment of different retinal pathologies represents another area of continuous improvement. The purpose of this Special Issue is to discuss matters associated with new concepts in the diagnosis and treatment of retinal diseases. The scope of this Special Issue is deliberately broad to encourage the coverage of a wide range of topics and perspectives related to the mechanisms of retinal diseases that are newly revealed by state-of-the-art diagnostic tools and related to promising therapeutic approaches in this field through original contributions or reviews.

About the Journal

Message from the Editor-in-Chief

Journal of Personalized Medicine is one of the few journals that covers the diverse areas involved in the field, including research at basic, translational, and clinical levels. It focuses on “omics”-level studies that seek to define the basis of interindividual variation in susceptibility for a disease, its prognosis or definition of clinical subsets, and response to therapy (pharmacogenomics). We are also interested in systems biology as it relates to interindividual variation, and research on new methodologies, informatics, and biostatistics, in the aforementioned areas.

Editor-in-Chief

Prof. Dr. Kenneth P.H. Pritzker

Department of Laboratory Medicine and Pathobiology, Department of Surgery, University of Toronto, 6 Queens Pk Crescent W.F, Toronto, ON M5S 3H2, Canada

Author Benefits

High Visibility:

indexed within Scopus, PubMed, PMC, Embase, and other databases.

Journal Rank:

CiteScore - Q1 (Medicine (miscellaneous))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 25 days after submission; acceptance to publication is undertaken in 5.8 days (median values for papers published in this journal in the second half of 2025).
