

Special Issue

Multi-Omics Biomarkers and Underlying Regulatory Mechanisms in Cancer Detection

Message from the Guest Editor

Cancer detection and stratification based on molecular profiles is of key importance for early detection, selection of the best treatment regime and for follow-up. With the advent of global molecular profiling developments, a myriad of individual markers have been reported. Little effort is aimed at integrating results of synergistic datasets of clinical parameters and multi-omics data. Moreover, novel molecular mechanisms are being discovered based on integrated multi-platform datasets. In the special issue papers are invited that address integrated molecular profiling results and/or reports of novel and relevant regulatory mechanisms in cancer.

About the Journal

Message from the Editor-in-Chief

Journal of Personalized Medicine (JPM), ISSN 2075-4426) is an international, open access journal aimed at bringing all aspects of personalized medicine to one platform. *JPM* publishes cutting edge, innovative preclinical and translational scientific research and technologies related to personalized medicine (e.g., precision medicine, pharmacogenomics/proteomics, systems biology, 'omics association analysis). *JPM* is covered in Scopus, the Science Citation Index Expanded (SCIE), PubMed, PMC, Embase, and other databases.

Editor-in-Chief

Prof. Dr. Kenneth P.H. Pritzker

Department of Laboratory Medicine and Pathobiology, Department of Surgery, University of Toronto, 6 Queens Pk Crescent W,F, Toronto, ON M5S 3H2, Canada

Author Benefits

High Visibility:

indexed within Scopus, PubMed, PMC, Embase, and other databases.

Journal Rank:

CiteScore - Q2 (Medicine (miscellaneous))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 17.4 days after submission; acceptance to publication is undertaken in 2.6 days (median values for papers published in this journal in the second half of 2024).
