

## Special Issue

# Multi-Omics Biomarkers and Underlying Regulatory Mechanisms in Cancer Detection

### Message from the Guest Editor

Cancer detection and stratification based on molecular profiles is of key importance for early detection, selection of the best treatment regime and for follow-up. With the advent of global molecular profiling developments, a myriad of individual markers have been reported. Little effort is aimed at integrating results of synergistic datasets of clinical parameters and multi-omics data. Moreover, novel molecular mechanisms are being discovered based on integrated multi-platform datasets. In the special issue papers are invited that address integrated molecular profiling results and/or reports of novel and relevant regulatory mechanisms in cancer.

## About the Journal

### Message from the Editor-in-Chief

*Journal of Personalized Medicine* is one of the few journals that covers the diverse areas involved in the field, including research at basic, translational, and clinical levels. It focuses on “omics”-level studies that seek to define the basis of interindividual variation in susceptibility for a disease, its prognosis or definition of clinical subsets, and response to therapy (pharmacogenomics). We are also interested in systems biology as it relates to interindividual variation, and research on new methodologies, informatics, and biostatistics, in the aforementioned areas.

### Author Benefits

#### High Visibility:

indexed within Scopus, PubMed, PMC, Embase, and other databases.

#### Journal Rank:

CiteScore - Q1 (Medicine (miscellaneous))

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 25 days after submission; acceptance to publication is undertaken in 5.8 days (median values for papers published in this journal in the second half of 2025).
