## Special Issue

## Current Status and Future Research in Infectious Diseases' Treatment and Prophylaxis

## Message from the Guest Editor

Over the years, viruses have proven that they can be unpredictable, but bacteria, parasites, and fungi can also take us by surprise. Global efforts have targeted prevention, and in some cases met with success: on the 29th of March 2023, the World Health Organization announced that a total of 42 countries or territories have reached the malaria-free milestone; however, there is much to be done in regard to cholera epidemics, monkeypox outbreaks, the prevalence of tuberculosis, the emergence of new multidrug-resistant fungi, such as Candida auris, and many more. The Special Issue is to discuss the current status of and future research in infectious diseases. Prophylaxis is usually the first approach, but when this is no longer possible, we must treat them. We welcome original articles and reviews providing new research data on infectious diseases irrespective of the etiology-bacterial, viral, parasitic, or mycotic—as well as on infectious diseases' current statuses and future research, prophylaxis, and treatment.

## About the Journal

### Message from the Editor-in-Chief

Journal of Personalized Medicine is one of the few journals that covers the diverse areas involved in the field, including research at basic, translational, and clinical levels. It focuses on "omics"-level studies that seek to define the basis of interindividual variation in susceptibility for a disease, its prognosis or definition of clinical

subsets, and response to therapy (pharmacogenomics). We are also interested in systems biology as it relates to interindividual variation, and research on new methodologies, informatics, and biostatistics, in the aforementioned areas.

#### Editor-in-Chief

#### Prof. Dr. Kenneth P.H. Pritzker

Department of Laboratory Medicine and Pathobiology, Department of Surgery, University of Toronto, 6 Queens Pk Crescent W.F, Toronto, ON M5S 3H2. Canada

### **Author Benefits**

### **High Visibility:**

indexed within Scopus, PubMed, PMC, Embase, and other databases.

#### Journal Rank:

CiteScore - Q1 (Medicine (miscellaneous))

### **Rapid Publication:**

manuscripts are peer-reviewed and a first decision is provided to authors approximately 21.5 days after submission; acceptance to publication is undertaken in 3.5 days (median values for papers published in this journal in the first half of 2025).
