New Knowledge and Challenges in Breast Cancer

Message from the Guest Editor

The treatment of breast cancer presents many challenges in both diagnosis and treatment.

Radiomics and genomics offer opportunities to select patients for the most appropriate treatments and allow glimpses of new scenarios.

Increasingly, knowledge on the characteristics of tumor subtypes makes it possible to predict responses to treatments and to select the most appropriate courses of treatment.

Increasingly, targeted cancer treatments and new technical advances in surgical treatments allow us to glimpse an increasingly personalized future of breast cancer care that respects the integrity of the person. Let us prepare to change the nomenclature of breast cancers.

About the Journal

Message from the Editor-in-Chief

Journal of Personalized Medicine is one of the few journals that covers the diverse areas involved in the field, including research at basic, translational, and clinical levels. It focuses on “omics”-level studies that seek to define the basis of interindividual variation in susceptibility for a disease, its prognosis or definition of clinical subsets, and response to therapy (pharmacogenomics). We are also interested in systems biology as it relates to interindividual variation, and research on new methodologies, informatics, and biostatistics, in the aforementioned areas.

Editor-in-Chief

Prof. Dr. Kenneth P.H. Pritzker

Department of Laboratory Medicine and Pathobiology, Department of Surgery, University of Toronto, 6 Queens Pk Crescent W.F, Toronto, ON M5S 3H2, Canada

Author Benefits

High Visibility:

indexed within Scopus, PubMed, PMC, Embase, and other databases.

Journal Rank:

CiteScore - Q1 (Medicine (miscellaneous))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 25 days after submission; acceptance to publication is undertaken in 5.8 days (median values for papers published in this journal in the second half of 2025).
