General Surgery: Current Position and Future Directions Applied to Personalized Medicine

Message from the Guest Editors

General surgery has seen a constant evolution over time in correlation with the other branches of medicine. The appearance of new interventional techniques, the impact of technological development, and the appearance of sub-specializations in general surgery require a reorganization and updating of knowledge in the field. The aim of this Special Issue is to publish cutting-edge clinical and translational scientific research and technologies related to general surgery and its related fields viewed from the perspective of personalized medicine (e.g., precision surgery, surgical anatomy, new surgical techniques, and general surgery patient management). The scope of this Special Issue is to publish original research but also reviews about new surgical procedures; advances and major trends that shape general surgery in oncology; trauma, gastrointestinal, vascular, and transplant surgery; and post-interventional recovery in the context of personalized medicine. Robotic surgery remains at the top of the cutting-edge technology list in general surgery.

About the Journal

Message from the Editor-in-Chief

Journal of Personalized Medicine is one of the few journals that covers the diverse areas involved in the field, including research at basic, translational, and clinical levels. It focuses on “omics”-level studies that seek to define the basis of interindividual variation in susceptibility for a disease, its prognosis or definition of clinical subsets, and response to therapy (pharmacogenomics). We are also interested in systems biology as it relates to interindividual variation, and research on new methodologies, informatics, and biostatistics, in the aforementioned areas.

Editor-in-Chief

Prof. Dr. Kenneth P.H. Pritzker

Department of Laboratory Medicine and Pathobiology, Department of Surgery, University of Toronto, 6 Queens Pk Crescent W.F, Toronto, ON M5S 3H2, Canada

Author Benefits

High Visibility:

indexed within Scopus, PubMed, PMC, Embase, and other databases.

Journal Rank:

CiteScore - Q1 (Medicine (miscellaneous))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 25 days after submission; acceptance to publication is undertaken in 5.8 days (median values for papers published in this journal in the second half of 2025).
