

Special Issue

United Airway Disease: Current Perspectives

Message from the Guest Editors

We are pleased to announce this Special Issue, which is aimed at enhancing the central role of the respiratory system in regulating homeostasis of the whole body. Searching for possible associations between different respiratory disorders, such as nasal congestion, allergy and asthma, entails *personalizing* medical treatment. Identifying the inflammatory profile of diseased patients contributes to *predicting* the effectiveness of medical and surgical therapeutic strategies. Nowadays, interest in the respiratory systems is increasing, as specialists are facing ever more clinical challenges. Recent advances in clinical immunology, which resulted in the approval of monoclonal antibodies for the treatment of chronic severe type-2 inflammation, have boosted this process further. These challenges entail the creation of multidisciplinary approaches aimed at keeping the patient at the centre of the treatment plan, from diagnostics to treatment proposals and follow-up. From this standpoint, this Special Issue is focused on exploring current perspectives, as well as on shining a spotlight on the most recent advances in both the diagnostic and therapeutic aspects of *united airway diseases*.

About the Journal

Message from the Editor-in-Chief

Journal of Personalized Medicine is one of the few journals that covers the diverse areas involved in the field, including research at basic, translational, and clinical levels. It focuses on “omics”-level studies that seek to define the basis of interindividual variation in susceptibility for a disease, its prognosis or definition of clinical subsets, and response to therapy (pharmacogenomics). We are also interested in systems biology as it relates to interindividual variation, and research on new methodologies, informatics, and biostatistics, in the aforementioned areas.

Editor-in-Chief

Prof. Dr. Kenneth P.H. Pritzker

Department of Laboratory Medicine and Pathobiology, Department of Surgery, University of Toronto, 6 Queens Pk Crescent W.F, Toronto, ON M5S 3H2, Canada

Author Benefits

High Visibility:

indexed within Scopus, PubMed, PMC, Embase, and other databases.

Journal Rank:

CiteScore - Q1 (Medicine (miscellaneous))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 21.5 days after submission; acceptance to publication is undertaken in 3.5 days (median values for papers published in this journal in the first half of 2025).
