

## Special Issue

# Personalized Medicine and Management of Gynecologic Cancer

### Message from the Guest Editors

Personalized medicine is an innovative approach to treating patients based on their genetic, molecular, and clinical profiles. This strategy will help optimize diagnosis, treatment, and prevention of gynecologic cancer by tailoring therapies to individual tumor characteristics, with the goal of improving treatment outcomes whilst minimizing side effects.

## About the Journal

### Message from the Editor-in-Chief

*Journal of Personalized Medicine* is one of the few journals that covers the diverse areas involved in the field, including research at basic, translational, and clinical levels. It focuses on “omics”-level studies that seek to define the basis of interindividual variation in susceptibility for a disease, its prognosis or definition of clinical subsets, and response to therapy (pharmacogenomics). We are also interested in systems biology as it relates to interindividual variation, and research on new methodologies, informatics, and biostatistics, in the aforementioned areas.

### Author Benefits

#### High Visibility:

indexed within Scopus, PubMed, PMC, Embase, and other databases.

#### Journal Rank:

CiteScore - Q1 (Medicine (miscellaneous))

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 25 days after submission; acceptance to publication is undertaken in 5.8 days (median values for papers published in this journal in the second half of 2025).
