Pregnancy Complication and Precision Medicine 2.0

Message from the Guest Editors

Precision medicine represents a bold research area with the potential to revolutionize the way we approach and treat diseases. Alongside nanotechnology and molecular medicine, precision medicine enables the specific delivery of therapeutic agents to cells and organs of interest, thus improving treatment outcomes and reducing side effects. In the obstetric field, several opportunities exist for existing diagnostic and treatment tools as well as for the development of innovative strategies that are driven by multiple factors, including fetal growth restriction, preterm birth, fetal abnormalities, and labor monitoring. In addition, maternal tumors in pregnancy could benefit from precise medicine development, reducing cancer treatment burden and improving pregnancy outcomes. This Special Issue aims to provide a collection of manuscripts providing an overview of the current status of precision medicine in pregnancy complications. We welcome research articles or reviews on pregnancy complications and precision medicine.

About the Journal

Message from the Editor-in-Chief

Journal of Personalized Medicine is one of the few journals that covers the diverse areas involved in the field, including research at basic, translational, and clinical levels. It focuses on “omics”-level studies that seek to define the basis of interindividual variation in susceptibility for a disease, its prognosis or definition of clinical subsets, and response to therapy (pharmacogenomics). We are also interested in systems biology as it relates to interindividual variation, and research on new methodologies, informatics, and biostatistics, in the aforementioned areas.

Editor-in-Chief

Prof. Dr. Kenneth P.H. Pritzker

Department of Laboratory Medicine and Pathobiology, Department of Surgery, University of Toronto, 6 Queens Pk Crescent W.F, Toronto, ON M5S 3H2, Canada

Author Benefits

High Visibility:

indexed within Scopus, PubMed, PMC, Embase, and other databases.

Journal Rank:

CiteScore - Q1 (Medicine (miscellaneous))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 21.5 days after submission; acceptance to publication is undertaken in 3.5 days (median values for papers published in this journal in the first half of 2025).
