Special Issue

New Advances and Challenges in Gastroenterology and Endoscopy

Message from the Guest Editors

Gastroenterology and endoscopy clinical services have significantly improved because of research advancements in recent decades. There has been a significant investment in research aimed at better diagnosis and treatment of many conditions. This has helped toward better surveillance and understanding of the diseases' progression, with potential direct clinical benefits in prevention and early treatment, especially in cancer screening programs. At the same time, there are several challenges that face full implementation of endoscopy screening programs and technology in countries with limited resources, leading to inequality of care provided to patients. This Special Issue of the *Journal of Personalized Medicine* aims to highlight the current state of endoscopy practice and showcase some of the most cutting-edge technologies and advancements in the field with a focus on the application of artificial intelligence and the use of patient-reported outcomes measures to enhance healthcare provided to patients. It will also cover the challenges of properly implementing endoscopy practice in resource-constrained settings.

About the Journal

Message from the Editor-in-Chief

Journal of Personalized Medicine is one of the few journals that covers the diverse areas involved in the field, including research at basic, translational, and clinical levels. It focuses on "omics"-level studies that seek to define the basis of interindividual variation in susceptibility for a disease, its prognosis or definition of clinical
subsets, and response to therapy (pharmacogenomics). We are also interested in systems biology as it relates to interindividual variation, and research on new methodologies, informatics, and biostatistics, in the aforementioned areas.

Editor-in-Chief

Prof. Dr. Kenneth P.H. Pritzker
Department of Laboratory Medicine and Pathobiology, Department of Surgery, University of Toronto, 6 Queens Pk Crescent W.F, Toronto, ON M5S 3H2, Canada

Author Benefits

High Visibility:
indexed within Scopus, PubMed, PMC, Embase, and other databases.

Journal Rank:
CiteScore - Q1 (Medicine (miscellaneous))

Rapid Publication:
manuscripts are peer-reviewed and a first decision is provided to authors approximately 25 days after submission; acceptance to publication is undertaken in 5.8 days (median values for papers published in this journal in the second half of 2025).
