## **Special Issue**

## Advances in Infectious Disease Epidemiology

## Message from the Guest Editor

Infectious diseases are among the main causes of morbidity and mortality worldwide. Advances in medical science have resulted in improvements in the diagnosis and treatment of patients that would have been considered incurable in the past.

Given the complexity of the infectious response, it is unlikely that a single approach will be sufficient to identify the interaction of different factors that are involved in emerging infectious diseases. Better strategies are necessary to prevent or diminish the collateral effects of pandemics. Educating and training healthcare workers are effective strategies for combating the dissemination and transmission of infectious agents.

This Special Issue aims to collate evidence regarding the epidemiology of infections. Infectious diseases are a persistent challenge for both clinicians and researchers.

We hope that this Special Issue will stimulate work on improving methodologies for the detection and treatment of infections by providing comprehensive discussions so that we can achieve early diagnoses and thus reduce complications.

## About the Journal

## Message from the Editor-in-Chief

Journal of Personalized Medicine is one of the few journals that covers the diverse areas involved in the field, including research at basic, translational, and clinical levels. It focuses on "omics"-level studies that seek to define the basis of interindividual variation in susceptibility for a disease, its prognosis or definition of clinical

subsets, and response to therapy (pharmacogenomics). We are also interested in systems biology as it relates to interindividual variation, and research on new methodologies, informatics, and biostatistics, in the aforementioned areas.

#### Editor-in-Chief

#### Prof. Dr. Kenneth P.H. Pritzker

Department of Laboratory Medicine and Pathobiology, Department of Surgery, University of Toronto, 6 Queens Pk Crescent W.F, Toronto, ON M5S 3H2. Canada

#### **Author Benefits**

### **High Visibility:**

indexed within Scopus, PubMed, PMC, Embase, and other databases.

#### Journal Rank:

CiteScore - Q1 (Medicine (miscellaneous))

### **Rapid Publication:**

manuscripts are peer-reviewed and a first decision is provided to authors approximately 21.5 days after submission; acceptance to publication is undertaken in 3.5 days (median values for papers published in this journal in the first half of 2025).
