Personalized Medicine in Maternal–Fetal Care: From Cervical Insufficiency to Preterm Birth and Beyond

Message from the Guest Editor

Cervical insufficiency and preterm birth remain leading causes of perinatal morbidity and mortality worldwide. Despite decades of research, individual risk prediction and intervention timing are still challenging. This Special Issue aims to highlight advances in personalized approaches to maternal–fetal care, integrating mechanical, biochemical, and digital parameters for early diagnosis and tailored therapy. We invite original research articles, reviews, and other types focusing on risk modeling, infection control, cerclage innovation, and multidisciplinary approaches that advance personalized maternal–fetal medicine.

About the Journal

Message from the Editor-in-Chief

Journal of Personalized Medicine is one of the few journals that covers the diverse areas involved in the field, including research at basic, translational, and clinical levels. It focuses on “omics”-level studies that seek to define the basis of interindividual variation in susceptibility for a disease, its prognosis or definition of clinical subsets, and response to therapy (pharmacogenomics). We are also interested in systems biology as it relates to interindividual variation, and research on new methodologies, informatics, and biostatistics, in the aforementioned areas.

Editor-in-Chief

Prof. Dr. Kenneth P.H. Pritzker

Department of Laboratory Medicine and Pathobiology, Department of Surgery, University of Toronto, 6 Queens Pk Crescent W.F, Toronto, ON M5S 3H2, Canada

Author Benefits

High Visibility:

indexed within Scopus, PubMed, PMC, Embase, and other databases.

Journal Rank:

CiteScore - Q1 (Medicine (miscellaneous))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 25 days after submission; acceptance to publication is undertaken in 5.8 days (median values for papers published in this journal in the second half of 2025).
