Advances in Oral Health: Innovative and Personalized Approaches

Message from the Guest Editors

The development of enhanced oral health services is driving a paradigm shift towards novel and personalized approaches to dentistry. The recognition of the individuality of each patient—whether through genetic predispositions or environmental factors—has transformed our approach to prevention, diagnosis, and treatment. Personalized dentistry incorporates cutting-edge technologies, such as AI-driven diagnostic tools, advanced imaging systems, and biomarker-based strategies, to deliver patient-centered care. Innovations in this field are equally remarkable, encompassing 3D printing for prosthodontics, digital orthodontics, and regenerative techniques for tissue repair. This Special Issue will focus on the latest developments in innovative and personalized approaches to oral health in the fields of orthodontics, pediatric dentistry, preventive dentistry, and dental science generally. We welcome papers that provide insights into breakthroughs in diagnostic tools, biomarker discovery, patient-specific treatment modalities, and the integration of digital technologies into clinical practice.

About the Journal

Message from the Editor-in-Chief

Journal of Personalized Medicine is one of the few journals that covers the diverse areas involved in the field, including research at basic, translational, and clinical levels. It focuses on “omics”-level studies that seek to define the basis of interindividual variation in susceptibility for a disease, its prognosis or definition of clinical subsets, and response to therapy (pharmacogenomics). We are also interested in systems biology as it relates to interindividual variation, and research on new methodologies, informatics, and biostatistics, in the aforementioned areas.

Editor-in-Chief

Prof. Dr. Kenneth P.H. Pritzker

Department of Laboratory Medicine and Pathobiology, Department of Surgery, University of Toronto, 6 Queens Pk Crescent W.F, Toronto, ON M5S 3H2, Canada

Author Benefits

High Visibility:

indexed within Scopus, PubMed, PMC, Embase, and other databases.

Journal Rank:

CiteScore - Q1 (Medicine (miscellaneous))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 21.5 days after submission; acceptance to publication is undertaken in 3.5 days (median values for papers published in this journal in the first half of 2025).
