

Special Issue

Personalized Diagnosis and Treatment for Head and Neck Cancer

Message from the Guest Editor

Precision diagnosis in the treatment of oral cancer is becoming increasingly important. Personalized and precision diagnosis is indispensable for early and rapid diagnosis, application to stratification in treatment, and analysis of the mechanisms of cancerization. On the other hand, the identification of stratification factors in treatment and the development of treatment modalities for oral and other head and neck cancers are lagging behind. This Special Issue welcomes original research papers or reviews on precision diagnosis and its use for early diagnosis and stratification of treatment for oral and other head and neck cancers.

About the Journal

Message from the Editor-in-Chief

Journal of Personalized Medicine is one of the few journals that covers the diverse areas involved in the field, including research at basic, translational, and clinical levels. It focuses on “omics”-level studies that seek to define the basis of interindividual variation in susceptibility for a disease, its prognosis or definition of clinical subsets, and response to therapy (pharmacogenomics). We are also interested in systems biology as it relates to interindividual variation, and research on new methodologies, informatics, and biostatistics, in the aforementioned areas.

Editor-in-Chief

Prof. Dr. Kenneth P.H. Pritzker

Department of Laboratory Medicine and Pathobiology, Department of Surgery, University of Toronto, 6 Queens Pk Crescent W.F, Toronto, ON M5S 3H2, Canada

Author Benefits

High Visibility:

indexed within Scopus, PubMed, PMC, Embase, and other databases.

Journal Rank:

CiteScore - Q1 (Medicine (miscellaneous))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 25 days after submission; acceptance to publication is undertaken in 5.8 days (median values for papers published in this journal in the second half of 2025).
