

## Special Issue

# Genomics and Precision Medicine

### Message from the Guest Editors

Genomics is one of the key components of personalized medicine and plays an important role in providing new diagnostic methods and optimizing treatment plans in the clinic. The combination of genomics and personalized medicine is a core research direction in today's medical field and is actively promoting the transformation of the medical model from "group treatment" to "individualized customization". With the development of genomics, how this discipline affects individual development and health, how to interpret genomic test results, and how to widely apply this method in clinical practice are issues of close concern. This Special Issue aims to act as a bridge between genomics and clinical practice, aiming to show how to transform genomic big data into executable clinical medicine strategies, analyze and provide personalized treatment plans, and thus promote the development of personalized medicine. We welcome authors to submit their reviews and original research articles focused on the latest findings regarding genomics and personalized medicine.

## About the Journal

### Message from the Editor-in-Chief

*Journal of Personalized Medicine* is one of the few journals that covers the diverse areas involved in the field, including research at basic, translational, and clinical levels. It focuses on “omics”-level studies that seek to define the basis of interindividual variation in susceptibility for a disease, its prognosis or definition of clinical subsets, and response to therapy (pharmacogenomics). We are also interested in systems biology as it relates to interindividual variation, and research on new methodologies, informatics, and biostatistics, in the aforementioned areas.

### Author Benefits

#### High Visibility:

indexed within Scopus, PubMed, PMC, Embase, and other databases.

#### Journal Rank:

CiteScore - Q1 (Medicine (miscellaneous))

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 25 days after submission; acceptance to publication is undertaken in 5.8 days (median values for papers published in this journal in the second half of 2025).
