

Special Issue

Personalized Prevention, Diagnosis and Treatment of Skin Disorders

Message from the Guest Editors

Skin disorders affect millions of individuals globally, presenting a significant challenge in dermatological therapy. They are often complex diseases with a polygenic background, immune mechanisms, and environmental triggers. Despite extensive public awareness, intervention, and screening programs, the incidence of skin cancers especially continues to rise rapidly. These conditions require effective and innovative diagnostic techniques and therapeutic approaches for their management and treatment. The aim of this Special Issue is to gather articles that present recent advancements in research involving the mechanisms that underlie the development of skin disorders, new technologies, as well as clinical research for personalized treatment focusing on surgery and prevention. Both clinical and basic science studies are to be considered. We warmly invite researchers to submit reviews, original research articles, communications, and systematic reviews in the field.

About the Journal

Message from the Editor-in-Chief

Journal of Personalized Medicine is one of the few journals that covers the diverse areas involved in the field, including research at basic, translational, and clinical levels. It focuses on “omics”-level studies that seek to define the basis of interindividual variation in susceptibility for a disease, its prognosis or definition of clinical subsets, and response to therapy (pharmacogenomics). We are also interested in systems biology as it relates to interindividual variation, and research on new methodologies, informatics, and biostatistics, in the aforementioned areas.

Editor-in-Chief

Prof. Dr. Kenneth P.H. Pritzker

Department of Laboratory Medicine and Pathobiology, Department of Surgery, University of Toronto, 6 Queens Pk Crescent W.F, Toronto, ON M5S 3H2, Canada

Author Benefits

High Visibility:

indexed within Scopus, PubMed, PMC, Embase, and other databases.

Journal Rank:

CiteScore - Q1 (Medicine (miscellaneous))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 25 days after submission; acceptance to publication is undertaken in 5.8 days (median values for papers published in this journal in the second half of 2025).
