Special Issue

Advances in Personalized Nursing Care

Message from the Guest Editors

The person-centered care model aims to ensure that people's rights, regardless of their age and functionality, are respected. This model considers the person as the centre of the care process, in which personalized care is provided, with the studies reporting positive impacts on both users and health professionals. The purpose of this Special Issue is to provide a comprehensive view relating to the advances in personalized nursing care throughout the lifecycle and in all care settings, such as in intensive care, palliative care, rehabilitation care and in the community. We welcome innovative research in the field of diagnostic assessment and nursing intervention. The findings should have implications for the improvement of personalized nursing care, nursing education, and nursing management, as well as contributing to the construction of education and health policies. Original articles, methodological studies. literature reviews, and metanalyses are welcome. We would like to encourage authors to submit solid research articles/communications or review papers.

About the Journal

Message from the Editor-in-Chief

Journal of Personalized Medicine is one of the few journals that covers the diverse areas involved in the field, including research at basic, translational, and clinical levels. It focuses on "omics"-level studies that seek to define the basis of interindividual variation in susceptibility for a disease, its prognosis or definition of clinical

subsets, and response to therapy (pharmacogenomics). We are also interested in systems biology as it relates to interindividual variation, and research on new methodologies, informatics, and biostatistics, in the aforementioned areas.

Editor-in-Chief

Prof. Dr. Kenneth P.H. Pritzker

Department of Laboratory Medicine and Pathobiology, Department of Surgery, University of Toronto, 6 Queens Pk Crescent W.F, Toronto, ON M5S 3H2. Canada

Author Benefits

High Visibility:

indexed within Scopus, PubMed, PMC, Embase, and other databases.

Journal Rank:

CiteScore - Q1 (Medicine (miscellaneous))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 21.5 days after submission; acceptance to publication is undertaken in 3.5 days (median values for papers published in this journal in the first half of 2025).
