Recent Advances in Parkinson's Disease

Message from the Guest Editor

Parkinson's disease is the second most common neurodegenerative disease in the world and affects millions of people globally. Much is left to discover about this disease. There is no resolute treatment; the cause is unknown; diagnostic tools are scanty; and, so far, it remains essentially a clinical diagnosis. However, in the recent decades several treatments have been available that alleviate signs and symptoms. Pathogenesis as well as some genetic aspects have been partially clarified and linked to clinical pictures. Magnetic Resonance is being used to study brain modification related to the disease. Other diagnostic tools are being developed, and we are about to reach the goal of personalized medicine applied to Parkinson's disease. We need to assess our current position in order to move forward.

About the Journal

Message from the Editor-in-Chief

Journal of Personalized Medicine is one of the few journals that covers the diverse areas involved in the field, including research at basic, translational, and clinical levels. It focuses on “omics”-level studies that seek to define the basis of interindividual variation in susceptibility for a disease, its prognosis or definition of clinical subsets, and response to therapy (pharmacogenomics). We are also interested in systems biology as it relates to interindividual variation, and research on new methodologies, informatics, and biostatistics, in the aforementioned areas.

Editor-in-Chief

Prof. Dr. Kenneth P.H. Pritzker

Department of Laboratory Medicine and Pathobiology, Department of Surgery, University of Toronto, 6 Queens Pk Crescent W.F, Toronto, ON M5S 3H2, Canada

Author Benefits

High Visibility:

indexed within Scopus, PubMed, PMC, Embase, and other databases.

Journal Rank:

CiteScore - Q1 (Medicine (miscellaneous))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 25 days after submission; acceptance to publication is undertaken in 5.8 days (median values for papers published in this journal in the second half of 2025).
