Advances in Urogenital Pathology

Message from the Guest Editors

The urogenital system, from the kidney to the penis, involves what is likely the widest spectrum of inflammatory, infectious, reactive, and neoplastic entities ever collected along the human body. Kidney, urinary tract, and prostate tumors are neoplasms frequently seen in daily practice, and their clinical management includes several of the most advanced examples of personalized medicine. Actually, new developments in therapies focusing on antiangiogenic, immune checkpoint blockage, and hormonal resistance are current hot topics in modern oncology. On the other hand, the non-neoplastic pathology in this field is frequent and varied, from malformations to reactive-inflammatory conditions and post-surgical complications, in which the latest technological developments deserve attention. This Special Issue intends to serve as a multidisciplinary forum where urologists, medical oncologists and radiotherapists, as well as nuclear medicine specialists, pathologists, radiologists and other specialists, can meet to improve patient care.

About the Journal

Message from the Editor-in-Chief

Journal of Personalized Medicine is one of the few journals that covers the diverse areas involved in the field, including research at basic, translational, and clinical levels. It focuses on “omics”-level studies that seek to define the basis of interindividual variation in susceptibility for a disease, its prognosis or definition of clinical subsets, and response to therapy (pharmacogenomics). We are also interested in systems biology as it relates to interindividual variation, and research on new methodologies, informatics, and biostatistics, in the aforementioned areas.

Editor-in-Chief

Prof. Dr. Kenneth P.H. Pritzker

Department of Laboratory Medicine and Pathobiology, Department of Surgery, University of Toronto, 6 Queens Pk Crescent W.F, Toronto, ON M5S 3H2, Canada

Author Benefits

High Visibility:

indexed within Scopus, PubMed, PMC, Embase, and other databases.

Journal Rank:

CiteScore - Q1 (Medicine (miscellaneous))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 25 days after submission; acceptance to publication is undertaken in 5.8 days (median values for papers published in this journal in the second half of 2025).
