

## Special Issue

# Application of Microbiome in Disease Diagnosis and Treatment

### Message from the Guest Editors

There is currently growing research into the impact of the gut microbiome on human homeostasis and how its alteration may influence the development of certain diseases via the gut–brain axis. Determining the levels of certain intestinal strains in diseases is becoming of great diagnostic value in the clinic, especially through 16S ribosomal RNA (rRNA) gene sequencing, quantitative polymerase chain reaction (qPCR), metabolomics, and metagenomic sequencing. The information provided by these analyses is extensive, including relative and absolute abundance, diversity, and microbial richness that can support diagnosis. Different strategies based on bidirectional communication between microbiota and brain can be used to restore the affected gut microbiota such as probiotics, prebiotics, and recently fecal microbiota transplantation. Thus, their use appears to have beneficial effects on individuals with autism, obesity, anxiety, depression, and hepatic encephalopathy. We thank you for considering this invitation and are available for any inquiries.

## About the Journal

### Message from the Editor-in-Chief

*Journal of Personalized Medicine* is one of the few journals that covers the diverse areas involved in the field, including research at basic, translational, and clinical levels. It focuses on “omics”-level studies that seek to define the basis of interindividual variation in susceptibility for a disease, its prognosis or definition of clinical subsets, and response to therapy (pharmacogenomics). We are also interested in systems biology as it relates to interindividual variation, and research on new methodologies, informatics, and biostatistics, in the aforementioned areas.

### Author Benefits

#### High Visibility:

indexed within Scopus, PubMed, PMC, Embase, and other databases.

#### Journal Rank:

CiteScore - Q1 (Medicine (miscellaneous))

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 25 days after submission; acceptance to publication is undertaken in 5.8 days (median values for papers published in this journal in the second half of 2025).
