Current Challenges and Advances in Chronic Respiratory Diseases

Message from the Guest Editor

The WHO has listed chronic obstructive pulmonary disease (COPD), asthma, occupational lung diseases, and pulmonary hypertension as the most common chronic respiratory diseases which also include obstructive sleep apnea and interstitial lung disease. Chronic respiratory diseases and their burden are threatening the sustainability of the healthcare system, so improving their management could be considered a strategic point. We are soliciting in-depth commentary, original research (including communications), and review articles with a focus on new developments and important advances in the diagnosis, treatments, and research of chronic respiratory diseases.

About the Journal

Message from the Editor-in-Chief

Journal of Personalized Medicine is one of the few journals that covers the diverse areas involved in the field, including research at basic, translational, and clinical levels. It focuses on “omics”-level studies that seek to define the basis of interindividual variation in susceptibility for a disease, its prognosis or definition of clinical subsets, and response to therapy (pharmacogenomics). We are also interested in systems biology as it relates to interindividual variation, and research on new methodologies, informatics, and biostatistics, in the aforementioned areas.

Editor-in-Chief

Prof. Dr. Kenneth P.H. Pritzker

Department of Laboratory Medicine and Pathobiology, Department of Surgery, University of Toronto, 6 Queens Pk Crescent W.F, Toronto, ON M5S 3H2, Canada

Author Benefits

High Visibility:

indexed within Scopus, PubMed, PMC, Embase, and other databases.

Journal Rank:

CiteScore - Q1 (Medicine (miscellaneous))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 21.5 days after submission; acceptance to publication is undertaken in 3.5 days (median values for papers published in this journal in the first half of 2025).
