Personalized Medicine in Dermatology

Message from the Guest Editors

The treatment landscape of dermatologic conditions has changed dramatically. Immune therapy and targeted treatments have revolutionized the field given their high efficacy and safety and are recommended as a first-line therapy in dermatologic disorders. The development of diagnostic and therapeutic guidelines has greatly reduced variation in clinical practice. Nevertheless, the extensive use of novel treatments has revealed considerable inter-individual variability regarding treatment response extent, promptness, and stability, as well as tolerance and adherence. Therefore, it has become obvious that a shift from a uniform, disease-centered treatment to a personalized one, centered on health maintenance, is needed to maximize efficacy and safety and reduce costs. We aim to gather and support both clinicians and researchers in sharing their experience with personalized treatment regimens, alongside the results of their innovative studies at the forefront of this particularly dynamic field. We warmly invite you to submit an original article or review on research areas such as inflammatory skin disease, bullous disorders, skin cancer, and genodermatoses, among others.

About the Journal

Message from the Editor-in-Chief

Journal of Personalized Medicine is one of the few journals that covers the diverse areas involved in the field, including research at basic, translational, and clinical levels. It focuses on “omics”-level studies that seek to define the basis of interindividual variation in susceptibility for a disease, its prognosis or definition of clinical subsets, and response to therapy (pharmacogenomics). We are also interested in systems biology as it relates to interindividual variation, and research on new methodologies, informatics, and biostatistics, in the aforementioned areas.

Editor-in-Chief

Prof. Dr. Kenneth P.H. Pritzker

Department of Laboratory Medicine and Pathobiology, Department of Surgery, University of Toronto, 6 Queens Pk Crescent W.F, Toronto, ON M5S 3H2, Canada

Author Benefits

High Visibility:

indexed within Scopus, PubMed, PMC, Embase, and other databases.

Journal Rank:

CiteScore - Q1 (Medicine (miscellaneous))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 25 days after submission; acceptance to publication is undertaken in 5.8 days (median values for papers published in this journal in the second half of 2025).
