

Special Issue

Personalized Medicine for Breast Cancer: Update and New Challenge

Message from the Guest Editors

This Special Issue seeks to highlight recent advances and emerging challenges in the field of personalized medicine for breast cancer. We invite original research articles, reviews, and expert perspectives focusing on novel biomarkers, resistance mechanisms, therapeutic sequencing, disparities in precision care, translational strategies, and innovations in diagnostics and clinical trial design. Our aim is to foster cross-disciplinary dialogue and accelerate progress toward equitable, individualized breast cancer care.

About the Journal

Message from the Editor-in-Chief

Journal of Personalized Medicine is one of the few journals that covers the diverse areas involved in the field, including research at basic, translational, and clinical levels. It focuses on “omics”-level studies that seek to define the basis of interindividual variation in susceptibility for a disease, its prognosis or definition of clinical subsets, and response to therapy (pharmacogenomics). We are also interested in systems biology as it relates to interindividual variation, and research on new methodologies, informatics, and biostatistics, in the aforementioned areas.

Editor-in-Chief

Prof. Dr. Kenneth P.H. Pritzker

Department of Laboratory Medicine and Pathobiology, Department of Surgery, University of Toronto, 6 Queens Pk Crescent W.F, Toronto, ON M5S 3H2, Canada

Author Benefits

High Visibility:

indexed within Scopus, PubMed, PMC, Embase, and other databases.

Journal Rank:

CiteScore - Q1 (Medicine (miscellaneous))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 25 days after submission; acceptance to publication is undertaken in 5.8 days (median values for papers published in this journal in the second half of 2025).
