Endometriosis: Advances in Diagnosis and Treatment

Message from the Guest Editor

Endometriosis is a complex, chronic gynaecological disorder that mostly affects women of reproductive age, with an estimated prevalence of approximately 10% among this population. However, this proportion seems to vary significantly due to the insufficiency of preoperative diagnostic tools and the fact that a significant majority of women with endometriosis are asymptomatic. The optimal treatment should be tailored according to patient and disease characteristics including age, preferences, symptoms and extent of the disease, as well as previous therapeutic interventions. Unfortunately, a significant proportion of women will present with recurrent disease irrespective of the previous treatment modality. Therefore, it is of critical importance to expand our knowledge on the novel diagnostic modalities and new therapeutic approaches for the disease. In this Special Issue, we invite original articles, reviews and perspectives addressing new insights, challenges and available knowledge on the diagnosis and treatment of endometriosis.

About the Journal

Message from the Editor-in-Chief

Journal of Personalized Medicine is one of the few journals that covers the diverse areas involved in the field, including research at basic, translational, and clinical levels. It focuses on “omics”-level studies that seek to define the basis of interindividual variation in susceptibility for a disease, its prognosis or definition of clinical subsets, and response to therapy (pharmacogenomics). We are also interested in systems biology as it relates to interindividual variation, and research on new methodologies, informatics, and biostatistics, in the aforementioned areas.

Editor-in-Chief

Prof. Dr. Kenneth P.H. Pritzker

Department of Laboratory Medicine and Pathobiology, Department of Surgery, University of Toronto, 6 Queens Pk Crescent W.F, Toronto, ON M5S 3H2, Canada

Author Benefits

High Visibility:

indexed within Scopus, PubMed, PMC, Embase, and other databases.

Journal Rank:

CiteScore - Q1 (Medicine (miscellaneous))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 25 days after submission; acceptance to publication is undertaken in 5.8 days (median values for papers published in this journal in the second half of 2025).
