Approaches Research into the Pathology and Treatment of Gynecologic Oncology

Message from the Guest Editors

Precision oncology represents a new frontier of targeting treatment for our patients. In the field of gynecologic oncology, recent biological, pathological and molecular advances are revolutionizing diagnostic and therapeutic management. Molecular characterization of gynecologic cancers has brought significant changes with respect to classification and introduction of targeted therapies. This Special Issue aims to collect studies related to recent discoveries in the field of gynecologic oncology concerning the clinical, pathological and molecular integration in the diagnosis and treatment of gynecologic cancers.

About the Journal

Message from the Editor-in-Chief

Journal of Personalized Medicine is one of the few journals that covers the diverse areas involved in the field, including research at basic, translational, and clinical levels. It focuses on “omics”-level studies that seek to define the basis of interindividual variation in susceptibility for a disease, its prognosis or definition of clinical subsets, and response to therapy (pharmacogenomics). We are also interested in systems biology as it relates to interindividual variation, and research on new methodologies, informatics, and biostatistics, in the aforementioned areas.

Editor-in-Chief

Prof. Dr. Kenneth P.H. Pritzker

Department of Laboratory Medicine and Pathobiology, Department of Surgery, University of Toronto, 6 Queens Pk Crescent W.F, Toronto, ON M5S 3H2, Canada

Author Benefits

High Visibility:

indexed within Scopus, PubMed, PMC, Embase, and other databases.

Journal Rank:

CiteScore - Q1 (Medicine (miscellaneous))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 25 days after submission; acceptance to publication is undertaken in 5.8 days (median values for papers published in this journal in the second half of 2025).
