

## Special Issue

# Genetic Basis and Clinical Determinants of Inherited Heart Disease

### Message from the Guest Editor

The aim of this Special Issue of the *Journal of Personalized Medicine* is to outline recent trends, updates, and progress on how genetic factors and/or clinical factors may impact disease severity in individuals with inherited heart disease.

Multidimensional research is needed and being conducted to resolve the complexity of inherited heart diseases, including genetic, molecular, and clinical studies. We are inviting the submission of original articles and review articles to this Special Issue that cover the whole spectrum of management of inherited heart disease, covering genetic, molecular, and clinical studies.

## About the Journal

### Message from the Editor-in-Chief

*Journal of Personalized Medicine* is one of the few journals that covers the diverse areas involved in the field, including research at basic, translational, and clinical levels. It focuses on “omics”-level studies that seek to define the basis of interindividual variation in susceptibility for a disease, its prognosis or definition of clinical subsets, and response to therapy (pharmacogenomics). We are also interested in systems biology as it relates to interindividual variation, and research on new methodologies, informatics, and biostatistics, in the aforementioned areas.

### Author Benefits

#### High Visibility:

indexed within Scopus, PubMed, PMC, Embase, and other databases.

#### Journal Rank:

CiteScore - Q1 (Medicine (miscellaneous))

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 25 days after submission; acceptance to publication is undertaken in 5.8 days (median values for papers published in this journal in the second half of 2025).
