

## Special Issue

# Personalized Medicine in Endometriosis

### Message from the Guest Editor

Personalized medicine is set to transform endometriosis management through individualized care tailored to genetic, environmental, and lifestyle factors. This Special Issue aims to compile research advancing clinical practice by customizing medication, surgical approaches, and behavioral advice to meet patient needs. We invite submissions of original research articles and review papers on metagenomics and epigenetics, particularly on how microbiome and epigenetic changes affect treatment options and outcomes. Pharmacogenomics, which adapts drug regimens to genetic profiles for better efficacy and safety, is another area of interest. We seek research on personalized therapies for endometriosis, focusing on nonspecific complaints such as fatigue, mood disorders, gastrointestinal issues, and stomach complaints. We also welcome studies on the gut microbiome's role in pain perception and symptom management via microbiota manipulation. The importance of screening and preventive care, along with the development of innovative diagnostic tools and techniques, completes our focus areas. We look forward to your contributions.

## About the Journal

### Message from the Editor-in-Chief

*Journal of Personalized Medicine* is one of the few journals that covers the diverse areas involved in the field, including research at basic, translational, and clinical levels. It focuses on “omics”-level studies that seek to define the basis of interindividual variation in susceptibility for a disease, its prognosis or definition of clinical subsets, and response to therapy (pharmacogenomics). We are also interested in systems biology as it relates to interindividual variation, and research on new methodologies, informatics, and biostatistics, in the aforementioned areas.

### Author Benefits

#### High Visibility:

indexed within Scopus, PubMed, PMC, Embase, and other databases.

#### Journal Rank:

CiteScore - Q1 (Medicine (miscellaneous))

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 25 days after submission; acceptance to publication is undertaken in 5.8 days (median values for papers published in this journal in the second half of 2025).
