

## Special Issue

# Personalized Medicine for Rheumatic Diseases

### Message from the Guest Editors

This Special Issue highlights and discusses the recent findings on rheumatic diseases, including the methodologies and tools used to detect, diagnose and manage the clinical counterpart of these diseases. The contributions reveal the importance of multidisciplinary teams that utilise the expertises of laboratory, clinical, imaging and clinimetry researchers while trying to fill the gaps in the knowledge about this topic, promising a great and exciting future in this field. We strongly encourage researchers to contribute to this Special Issue and share novel approaches to the diagnosis and treatment of rheumatic diseases.

## About the Journal

### Message from the Editor-in-Chief

*Journal of Personalized Medicine* is one of the few journals that covers the diverse areas involved in the field, including research at basic, translational, and clinical levels. It focuses on “omics”-level studies that seek to define the basis of interindividual variation in susceptibility for a disease, its prognosis or definition of clinical subsets, and response to therapy (pharmacogenomics). We are also interested in systems biology as it relates to interindividual variation, and research on new methodologies, informatics, and biostatistics, in the aforementioned areas.

### Author Benefits

#### High Visibility:

indexed within Scopus, PubMed, PMC, Embase, and other databases.

#### Journal Rank:

CiteScore - Q1 (Medicine (miscellaneous))

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 25 days after submission; acceptance to publication is undertaken in 5.8 days (median values for papers published in this journal in the second half of 2025).
