Precision Medicine in Neurodevelopmental Disorders: Personalized Characterization of Autism from Molecules to Behavior

Message from the Guest Editor

The precision medicine (PM) platform has emerged as a powerful model for the development of personalized targeted treatments in cancer research. It may be advantageous to adapt this model to psychiatric and psychological disorders that are now defined within the realm of mental illness, without reference to their underlying neurology. Among such disorders are autism, currently defined through observation and description of behaviors, with an emphasis on social inappropriateness.

In this Special Issue, we redefine the layer of behaviors of the PM model by leveraging the wearable sensors revolution and considering the neurological underpinnings of currently defined autistic behaviors. By redefining autism as a problem of nervous system development, and pairing new objective criteria with physical data from biosensors we will be able to stratify autism into different subtypes according to the structure and function of the nervous systems, thus leveraging the phylogenetic order of maturation that neurobiology already defines from molecules to complex social interactions.

About the Journal

Message from the Editor-in-Chief

Journal of Personalized Medicine (JPM; ISSN 2075-4426) is an international, open access journal aimed at bringing all aspects of personalized medicine to one platform. JPM publishes cutting edge, innovative preclinical and translational scientific research and technologies related to personalized medicine (e.g., precision medicine, pharmacogenomics/proteomics, systems biology, 'omics association analysis). JPM is covered in Scopus, the Science Citation Index Expanded (SCIE), PubMed, PMC, Embase, and other databases.

Editor-in-Chief

Prof. Dr. Kenneth P.H. Pritzker

Department of Laboratory Medicine and Pathobiology, Department of Surgery, University of Toronto, 6 Queens Pk Crescent W.F, Toronto, ON M5S 3H2, Canada

Author Benefits

High Visibility:

indexed within Scopus, PubMed, PMC, Embase, and other databases.

Journal Rank:

CiteScore - Q1 (Medicine (miscellaneous))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 21.5 days after submission; acceptance to publication is undertaken in 3.5 days (median values for papers published in this journal in the first half of 2025).
