

## Special Issue

# Biobank and Biorepository in Personalized Medicine

### Message from the Guest Editor

Biobanks are infrastructures aiming at collecting, processing, storing and distributing biological samples (usually human) and derivative materials for use in research, along with associated data and within defined regulatory frameworks. Biobanking has become an important resource in medical research, supporting the scaling-up of many types of contemporary research such as genomics and personalized medicine. In recent years, many disease-oriented biobanks have emerged, while tumor biobanks have attracted great interest and funding. This Special Issue will focus on recent advances in the field of biobanking and biobanking research and its application of novel techniques in the field of personalized medicine. Original articles and reviews highlighting biobanks in disease treatment and personalized medicine are welcome.

## About the Journal

### Message from the Editor-in-Chief

*Journal of Personalized Medicine* is one of the few journals that covers the diverse areas involved in the field, including research at basic, translational, and clinical levels. It focuses on “omics”-level studies that seek to define the basis of interindividual variation in susceptibility for a disease, its prognosis or definition of clinical subsets, and response to therapy (pharmacogenomics). We are also interested in systems biology as it relates to interindividual variation, and research on new methodologies, informatics, and biostatistics, in the aforementioned areas.

### Author Benefits

#### High Visibility:

indexed within Scopus, PubMed, PMC, Embase, and other databases.

#### Journal Rank:

CiteScore - Q1 (Medicine (miscellaneous))

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 25 days after submission; acceptance to publication is undertaken in 5.8 days (median values for papers published in this journal in the second half of 2025).
