Personalized Medicine for Neuroimmunology and Epigenetics in Depressive Disorders

Message from the Guest Editors

Depressive disorders are one of the most common mental disorders worldwide. They are a leading cause of disability. Despite their high prevalence, the etiopathogenesis of depressive disorders is not yet fully understood. The aim of recent studies in the field of psychiatry is to seek consistent theory that would exhaustively explain the aetiology of depression. Neuroimmunology, epigenetics, and their correlations seem to play an important role in this matter. We would like to invite experts to participate in our Special Issue, in which we would like to focus on the biological background of depressive disorders. Nowadays, when one third of the patients suffer from treatment resistant depression, seeking for new therapeutic targets is especially important. Since depression also has a significant impact on socioeconomics, scientists are also seeking methods of its primary prevention. Original research papers, brief scientific reports, as well as review papers, regarding the given topic, will be considered for publication in this Special Issue "Personalized Medicine for Neuroimmunology and Epigenetics in Depressive Disorders".

About the Journal

Message from the Editor-in-Chief

Journal of Personalized Medicine (JPM), ISSN 2075-4426) is an international, open access journal aimed at bringing all aspects of personalized medicine to one platform. *JPM* publishes cutting edge, innovative preclinical and translational scientific research and technologies related to personalized medicine (e.g., precision medicine, pharmacogenomics/proteomics, systems biology, 'omics association analysis). *JPM* is covered in Scopus, the Science Citation Index Expanded (SCIE), PubMed, PMC, Embase, and other databases.

Editor-in-Chief

Prof. Dr. Kenneth P.H. Pritzker

Department of Laboratory Medicine and Pathobiology, Department of Surgery, University of Toronto, 6 Queens Pk Crescent W,F, Toronto, ON M5S 3H2, Canada

Author Benefits

High Visibility:

indexed within Scopus, PubMed, PMC, Embase, and other databases.

Journal Rank:

CiteScore - Q1 (Medicine (miscellaneous))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 21.5 days after submission; acceptance to publication is undertaken in 3.5 days (median values for papers published in this journal in the first half of 2025).
