

## Special Issue

# Precision Medicine in Dentistry and Oral Surgery

### Message from the Guest Editors

This Special Issue aims to gather high-quality research and reviews that explore the current and emerging applications of precision medicine across all fields of dental and oral surgical practice. We welcome interdisciplinary contributions that highlight clinical translation, technological innovation, and the challenges and opportunities in implementing precision-based strategies in daily practice. The topics in this Special Issue include (but are not limited to) biomarker discovery, individualized treatment planning, AI and machine learning in diagnosis and prognosis, digital and 3D technologies, genomics and epigenetics, pharmacogenomics, risk stratification, and personalized surgical interventions.

## About the Journal

### Message from the Editor-in-Chief

*Journal of Personalized Medicine* is one of the few journals that covers the diverse areas involved in the field, including research at basic, translational, and clinical levels. It focuses on “omics”-level studies that seek to define the basis of interindividual variation in susceptibility for a disease, its prognosis or definition of clinical subsets, and response to therapy (pharmacogenomics). We are also interested in systems biology as it relates to interindividual variation, and research on new methodologies, informatics, and biostatistics, in the aforementioned areas.

### Author Benefits

#### High Visibility:

indexed within Scopus, PubMed, PMC, Embase, and other databases.

#### Journal Rank:

CiteScore - Q1 (Medicine (miscellaneous))

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 25 days after submission; acceptance to publication is undertaken in 5.8 days (median values for papers published in this journal in the second half of 2025).
