

## Special Issue

# Lung Cancer and Personalized Medicine

### Message from the Guest Editor

Lung cancer is the leading cause of cancer death worldwide, with more than 1 million deaths annually. It is classified into multiple histological subtypes. How similar are these subtypes in genetic background and prognosis, however? Despite recent advances in diagnostic and therapeutic strategies, the prognosis of several subtypes of lung cancer remains poor. This Special Issue aims to clarify the characteristics between the subtypes of lung cancer and their associations with prognosis and therapy.

### Author Benefits

#### High Visibility:

indexed within Scopus, PubMed, PMC, Embase, and other databases.

#### Journal Rank:

CiteScore - Q1 (Medicine (miscellaneous))

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 21.5 days after submission; acceptance to publication is undertaken in 3.5 days (median values for papers published in this journal in the first half of 2025).
