

Special Issue

Personalized Medicine in Rheumatology—towards Adapting Our Care to Manifold Patient Phenotypes

Message from the Guest Editors

The Special Issue aims to collect the most recent insights into clinical and translational research, as well as works describing the implementation of novel methodological approaches for advances in personalized medicine. It may address unmet needs in rare rheumatologic autoimmune diseases, connective tissue diseases and the full spectrum of arthritic disorders to help in the further guidance of tailored patient care. No specific restriction on the heterogeneity of rheumatic conditions applies. We are especially interested in the management of care, specific targeted therapies, treatment selection, patient stratification, the application of artificial intelligence to manage the increasing data influx in various patients as well as disease characteristics and associated -omics profiling. We invite the submission of quantitative as well as qualitative clinical research or translational research of original work in the above outlined arena. Reviews or systematic literature reviews summarizing the complexity of this arena are also welcome.

About the Journal

Message from the Editor-in-Chief

Journal of Personalized Medicine is one of the few journals that covers the diverse areas involved in the field, including research at basic, translational, and clinical levels. It focuses on “omics”-level studies that seek to define the basis of interindividual variation in susceptibility for a disease, its prognosis or definition of clinical subsets, and response to therapy (pharmacogenomics). We are also interested in systems biology as it relates to interindividual variation, and research on new methodologies, informatics, and biostatistics, in the aforementioned areas.

Editor-in-Chief

Prof. Dr. Kenneth P.H. Pritzker

Department of Laboratory Medicine and Pathobiology, Department of Surgery, University of Toronto, 6 Queens Pk Crescent W.F, Toronto, ON M5S 3H2, Canada

Author Benefits

High Visibility:

indexed within Scopus, PubMed, PMC, Embase, and other databases.

Journal Rank:

CiteScore - Q1 (Medicine (miscellaneous))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 25 days after submission; acceptance to publication is undertaken in 5.8 days (median values for papers published in this journal in the second half of 2025).
