

## Special Issue

# The Challenges and Therapeutic Prospects in Eye Disease

### Message from the Guest Editor

In the last decade we have gained a deeper understanding of the underlying pathogenesis of various ocular disease, which has resulted in the development of novel effective targeted therapies such as teprotumumab for the treatment of active thyroid eye disease. This Special Issues of *Journal of Personalized Medicine* aims to update the current evidence and collect the latest findings on various ocular disease. Particular attention will be paid to original research articles, case reports, and state-of-the-art reviews to explore how to *overcome* the *challenges* and navigate the emerging therapeutic landscape.

## About the Journal

### Message from the Editor-in-Chief

*Journal of Personalized Medicine* is one of the few journals that covers the diverse areas involved in the field, including research at basic, translational, and clinical levels. It focuses on “omics”-level studies that seek to define the basis of interindividual variation in susceptibility for a disease, its prognosis or definition of clinical subsets, and response to therapy (pharmacogenomics). We are also interested in systems biology as it relates to interindividual variation, and research on new methodologies, informatics, and biostatistics, in the aforementioned areas.

### Author Benefits

#### High Visibility:

indexed within Scopus, PubMed, PMC, Embase, and other databases.

#### Journal Rank:

CiteScore - Q1 (Medicine (miscellaneous))

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 25 days after submission; acceptance to publication is undertaken in 5.8 days (median values for papers published in this journal in the second half of 2025).
