Predicting Psychopathological Onset: Early Signs of Neuropsychiatric Diseases

Message from the Guest Editor

Millions of people worldwide are affected by neuropsychiatric disorders, such as anxiety, major depression, bipolar disorder, schizophrenia, obsessive-compulsive disorder, autism spectrum disorder (ASD), attention-deficit/hyperactivity disorder, and post-traumatic stress disorder. Although clinical tools are valuable in treating psychopathologies, the identification of early signs of psychopathology remains a main target to be reached in order to improve treatment effectiveness and reduce poor outcomes. The assessment of biological, behavioural, and cognitive markers of psychopathology could provide a significant support in pre-clinical phases to identify vulnerability factors, understand the course of illness and predict its outcome, as well as aid clinicians in the therapeutic decision-making process. In this Special Issue of the *Journal of Personalized Medicine*, papers addressing early markers of psychopathology aimed at improving diagnostic tools and at envisaging personalized therapies are welcome.

About the Journal

Message from the Editor-in-Chief

Journal of Personalized Medicine is one of the few journals that covers the diverse areas involved in the field, including research at basic, translational, and clinical levels. It focuses on “omics”-level studies that seek to define the basis of interindividual variation in susceptibility for a disease, its prognosis or definition of clinical subsets, and response to therapy (pharmacogenomics). We are also interested in systems biology as it relates to interindividual variation, and research on new methodologies, informatics, and biostatistics, in the aforementioned areas.

Editor-in-Chief

Prof. Dr. Kenneth P.H. Pritzker

Department of Laboratory Medicine and Pathobiology, Department of Surgery, University of Toronto, 6 Queens Pk Crescent W.F, Toronto, ON M5S 3H2, Canada

Author Benefits

High Visibility:

indexed within Scopus, PubMed, PMC, Embase, and other databases.

Journal Rank:

CiteScore - Q1 (Medicine (miscellaneous))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 25 days after submission; acceptance to publication is undertaken in 5.8 days (median values for papers published in this journal in the second half of 2025).
