

## Special Issue

# Novel Studies and Therapeutic Options for Skin Disease

### Message from the Guest Editors

The skin is a sophisticated organ whose homeostasis may be disturbed by a wide range of pathological processes. Our understanding of the complexity of the skin's structure and immunology has significantly expanded in recent years. Translational medicine is currently entering the field of dermatology, providing novel, personalized solutions to patients with cutaneous disorders. In this context, the aim of this Special Issue is to highlight late-breaking developments in the diagnosis and treatment of skin diseases. We look forward to your submissions.

## About the Journal

### Message from the Editor-in-Chief

*Journal of Personalized Medicine* is one of the few journals that covers the diverse areas involved in the field, including research at basic, translational, and clinical levels. It focuses on “omics”-level studies that seek to define the basis of interindividual variation in susceptibility for a disease, its prognosis or definition of clinical subsets, and response to therapy (pharmacogenomics). We are also interested in systems biology as it relates to interindividual variation, and research on new methodologies, informatics, and biostatistics, in the aforementioned areas.

### Author Benefits

#### High Visibility:

indexed within Scopus, PubMed, PMC, Embase, and other databases.

#### Journal Rank:

CiteScore - Q1 (Medicine (miscellaneous))

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 25 days after submission; acceptance to publication is undertaken in 5.8 days (median values for papers published in this journal in the second half of 2025).
