Advances in Emerging Technologies for Rehabilitation: Personalized Perspective

Message from the Guest Editors

In recent years, the utilization of virtual reality, robotics, health wearables, and telemedicine has become more common in science and clinical practice. Remote support can cover a wide spectrum of technologies, from simple telephone consultations, through very popular videoconferences, to advanced videoconferencing with integrated wearable sensors and feedback, which allows interaction with the patient in real time. VR can cover a wide spectrum of technologies, starting from simple feedback using a monitor, through the popular head-mounted display (VR goggle), to advanced EMG-based robotic devices that can be integrated within the VR environment. So personalized treatment and management are also increasingly important.

However, owing to its novelty, these topics still need to be explored. There are still areas that are uncovered, while others require further work and systematization. Therefore, we propose this Special Issue as a contribution to the technology-supported field. Submissions are welcome for the following article types: original research, and reviews.

About the Journal

Message from the Editor-in-Chief

Journal of Personalized Medicine is one of the few journals that covers the diverse areas involved in the field, including research at basic, translational, and clinical levels. It focuses on “omics”-level studies that seek to define the basis of interindividual variation in susceptibility for a disease, its prognosis or definition of clinical subsets, and response to therapy (pharmacogenomics). We are also interested in systems biology as it relates to interindividual variation, and research on new methodologies, informatics, and biostatistics, in the aforementioned areas.

Editor-in-Chief

Prof. Dr. Kenneth P.H. Pritzker

Department of Laboratory Medicine and Pathobiology, Department of Surgery, University of Toronto, 6 Queens Pk Crescent W.F, Toronto, ON M5S 3H2, Canada

Author Benefits

High Visibility:

indexed within Scopus, PubMed, PMC, Embase, and other databases.

Journal Rank:

CiteScore - Q1 (Medicine (miscellaneous))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 25 days after submission; acceptance to publication is undertaken in 5.8 days (median values for papers published in this journal in the second half of 2025).
