

Special Issue

Musculoskeletal Diseases: Diagnosis, Rehabilitation and Personalized Treatment

Message from the Guest Editor

Musculoskeletal diseases represent a growing challenge for physicians all over the world. They cause pain and disability, drastically reducing the quality of life of patients. This Special Issue therefore welcomes original articles and reviews that outline the most important innovations regarding the diagnosis and rehabilitation of these pathologies. Moreover, emphasis will mostly be placed on technological innovations such as telemedicine, new diagnostic and treatment tools (especially for pain), new drugs (particularly regenerative medicine), and solutions that facilitate the creation of individualized and effective therapy protocols.

About the Journal

Message from the Editor-in-Chief

Journal of Personalized Medicine is one of the few journals that covers the diverse areas involved in the field, including research at basic, translational, and clinical levels. It focuses on “omics”-level studies that seek to define the basis of interindividual variation in susceptibility for a disease, its prognosis or definition of clinical subsets, and response to therapy (pharmacogenomics). We are also interested in systems biology as it relates to interindividual variation, and research on new methodologies, informatics, and biostatistics, in the aforementioned areas.

Editor-in-Chief

Prof. Dr. Kenneth P.H. Pritzker

Department of Laboratory Medicine and Pathobiology, Department of Surgery, University of Toronto, 6 Queens Pk Crescent W.F, Toronto, ON M5S 3H2, Canada

Author Benefits

High Visibility:

indexed within Scopus, PubMed, PMC, Embase, and other databases.

Journal Rank:

CiteScore - Q1 (Medicine (miscellaneous))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 25 days after submission; acceptance to publication is undertaken in 5.8 days (median values for papers published in this journal in the second half of 2025).
