

Special Issue

Clinical and Experimental Surgery in Personalized Molecular Medicine

Message from the Guest Editors

Surgical research can encompass a variety of different fields, like the evaluation of new technologies, biomaterials, a new molecule with pharmaceutical activity, predictive interventions, and prognostic interventions, as well as combinations of all the described methods. This new approach can be implemented at an experimental as well as a clinical level. Under the modern prism of personalized molecular medicine and the future applications in clinical practice, surgical research opens a new window on innovation and the implementation of these modern methods for the benefit of the patients. This Special Issue focuses on the publication of both experimental and clinical surgical research papers, in combination with personalized molecular methods, aiming at promoting scientific knowledge and multidisciplinary approaches in future medical therapies.

About the Journal

Message from the Editor-in-Chief

Journal of Personalized Medicine is one of the few journals that covers the diverse areas involved in the field, including research at basic, translational, and clinical levels. It focuses on “omics”-level studies that seek to define the basis of interindividual variation in susceptibility for a disease, its prognosis or definition of clinical subsets, and response to therapy (pharmacogenomics). We are also interested in systems biology as it relates to interindividual variation, and research on new methodologies, informatics, and biostatistics, in the aforementioned areas.

Editor-in-Chief

Prof. Dr. Kenneth P.H. Pritzker

Department of Laboratory Medicine and Pathobiology, Department of Surgery, University of Toronto, 6 Queens Pk Crescent W.F, Toronto, ON M5S 3H2, Canada

Author Benefits

High Visibility:

indexed within Scopus, PubMed, PMC, Embase, and other databases.

Journal Rank:

CiteScore - Q1 (Medicine (miscellaneous))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 25 days after submission; acceptance to publication is undertaken in 5.8 days (median values for papers published in this journal in the second half of 2025).
