

Special Issue

Advances in the Therapeutics of Neurological Diseases

Message from the Guest Editor

Neurology, as well as other branches of Medicine, is in rapid expansion, particularly in the improvement of diagnostic methods as well as the development of new therapies, including those related to personalized medicine. This Special Issue aims to summarize the most recent advances in the therapy of neurological diseases. For this purpose, I have made an initial selection of several topics of interest related to different subspecialties in the field of Neurology (headache, multiple sclerosis, epilepsy, dementia, stroke, neuromuscular disorders, movement disorders, sleep disorders, ...), although proposals for other topics are welcome.

About the Journal

Message from the Editor-in-Chief

Journal of Personalized Medicine is one of the few journals that covers the diverse areas involved in the field, including research at basic, translational, and clinical levels. It focuses on “omics”-level studies that seek to define the basis of interindividual variation in susceptibility for a disease, its prognosis or definition of clinical subsets, and response to therapy (pharmacogenomics). We are also interested in systems biology as it relates to interindividual variation, and research on new methodologies, informatics, and biostatistics, in the aforementioned areas.

Editor-in-Chief

Prof. Dr. Kenneth P.H. Pritzker

Department of Laboratory Medicine and Pathobiology, Department of Surgery, University of Toronto, 6 Queens Pk Crescent W.F, Toronto, ON M5S 3H2, Canada

Author Benefits

High Visibility:

indexed within Scopus, PubMed, PMC, Embase, and other databases.

Journal Rank:

CiteScore - Q1 (Medicine (miscellaneous))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 25 days after submission; acceptance to publication is undertaken in 5.8 days (median values for papers published in this journal in the second half of 2025).
