Recent Advances in Psychopharmacology: From Bench to Bedside

Message from the Guest Editor

Although pharmacogenomic research in psychiatry is not advanced enough to provide a genetic basis for screening and developing new molecules, it offers significant promise for future studies. Based on this background, we launched this Special Issue as a platform to publish studies from researchers employing various research methods and technologies to study psychopharmacological advances in psychiatry. We welcome original papers, reviews, or meta-analyses based on animal and human studies. We will consider papers reporting observational, clinical trials, genetics, imaging, computational, health service research, and ecological and in vitro data.

About the Journal

Message from the Editor-in-Chief

Journal of Personalized Medicine is one of the few journals that covers the diverse areas involved in the field, including research at basic, translational, and clinical levels. It focuses on “omics”-level studies that seek to define the basis of interindividual variation in susceptibility for a disease, its prognosis or definition of clinical subsets, and response to therapy (pharmacogenomics). We are also interested in systems biology as it relates to interindividual variation, and research on new methodologies, informatics, and biostatistics, in the aforementioned areas.

Editor-in-Chief

Prof. Dr. Kenneth P.H. Pritzker

Department of Laboratory Medicine and Pathobiology, Department of Surgery, University of Toronto, 6 Queens Pk Crescent W.F, Toronto, ON M5S 3H2, Canada

Author Benefits

High Visibility:

indexed within Scopus, PubMed, PMC, Embase, and other databases.

Journal Rank:

CiteScore - Q1 (Medicine (miscellaneous))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 25 days after submission; acceptance to publication is undertaken in 5.8 days (median values for papers published in this journal in the second half of 2025).
