

## Special Issue

# Diagnostics and Therapeutics in Ophthalmology—2nd Edition

### Message from the Guest Editor

Evidence-based practice allows us to achieve reproducible results and provide patients with high-quality evidence-based care. Clinical studies of our current practice and clinical studies of how to tackle the challenges of the future are paramount to further enhance our understanding and improve diagnostics and therapeutics in ophthalmology. I invite you to consider this Special Issue for original research and review paper submissions that outline the clinical aspects of ophthalmology, including diagnostics and therapeutics.

## About the Journal

### Message from the Editor-in-Chief

*Journal of Personalized Medicine* is one of the few journals that covers the diverse areas involved in the field, including research at basic, translational, and clinical levels. It focuses on “omics”-level studies that seek to define the basis of interindividual variation in susceptibility for a disease, its prognosis or definition of clinical subsets, and response to therapy (pharmacogenomics). We are also interested in systems biology as it relates to interindividual variation, and research on new methodologies, informatics, and biostatistics, in the aforementioned areas.

### Author Benefits

#### High Visibility:

indexed within Scopus, PubMed, PMC, Embase, and other databases.

#### Journal Rank:

CiteScore - Q1 (Medicine (miscellaneous))

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 25 days after submission; acceptance to publication is undertaken in 5.8 days (median values for papers published in this journal in the second half of 2025).
