Gynecological Surgery: Current Perspectives and Future Challenges

Message from the Guest Editors

The purpose of this Special Issue is to present studies on new surgical frontiers for the treatment of benign and, above all, malignant diseases, from endometrial cancers passing through that of the ovary, to those of the cervix and vulva. Alongside laparotomic and laparoscopic surgeries, the use of robot-assisted laparoscopic (RAL) surgery and vaginal natural orifice transluminal endoscopic surgery (vNOTES) has been increasing for years, allowing excellent surgical results as well as reduced operating times, shorter hospital stays, better aesthetic results and the possibility of carrying out the surgery under regional anesthesia.

As with medical therapy, surgery can now also be performed on the basis of not only the type of disease, but also the type of patient. Especially for malignant conditions, there is a need to highlight current perspectives with an eye to the future, allowing surgeons to work in harmony with clinicians—in particular, oncologists and radiotherapists. For these reasons, original articles, as well as systematic and narrative reviews of the literature, are welcome to be submitted to this Special Issue.

About the Journal

Message from the Editor-in-Chief

Journal of Personalized Medicine is one of the few journals that covers the diverse areas involved in the field, including research at basic, translational, and clinical levels. It focuses on “omics”-level studies that seek to define the basis of interindividual variation in susceptibility for a disease, its prognosis or definition of clinical subsets, and response to therapy (pharmacogenomics). We are also interested in systems biology as it relates to interindividual variation, and research on new methodologies, informatics, and biostatistics, in the aforementioned areas.

Editor-in-Chief

Prof. Dr. Kenneth P.H. Pritzker

Department of Laboratory Medicine and Pathobiology, Department of Surgery, University of Toronto, 6 Queens Pk Crescent W.F, Toronto, ON M5S 3H2, Canada

Author Benefits

High Visibility:

indexed within Scopus, PubMed, PMC, Embase, and other databases.

Journal Rank:

CiteScore - Q1 (Medicine (miscellaneous))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 25 days after submission; acceptance to publication is undertaken in 5.8 days (median values for papers published in this journal in the second half of 2025).
