Special Issue

Psoriatic Arthritis and the Need to Personalize Diagnosis, Clinimetry, and Treatment

Message from the Guest Editor

Psoriatic arthritis represents a condition whose clinical expressiveness can be extremely heterogeneous. The wide clinical variability often results in diagnostic pitfalls, hence the need for a personalized approach on multiple fronts: from the use of sophisticated imaging techniques, to clinimetry according to prevalent manifestations, to treatment. The high prevalence of coexisting fibromyalgia can complicate the evaluation of these patients. With these issues as our focus, I am delighted to invite you to contribute to this Special Issue, aimed at emphasizing the need for personalization in the setting of psoriatic arthritis. Areas covered by this Special Issue (both original contributions and literature reviews are welcome) include, but are not limited to:

- The use of imaging techniques in the diagnosis of psoriatic arthritis and its major manifestations (synovitis, enthesitis, dactylitis, axial involvement);
- The clinimetric approach with reference to inflammatory manifestations and disease impact on quality of life;
- The burden of comorbidities, including fibromyalgia among them;
- Therapeutic personalization.

About the Journal

Message from the Editor-in-Chief

Journal of Personalized Medicine is one of the few journals that covers the diverse areas involved in the field, including research at basic, translational, and clinical levels. It focuses on "omics"-level studies that seek to define the basis of interindividual variation in susceptibility for a disease, its prognosis or definition of clinical

subsets, and response to therapy (pharmacogenomics). We are also interested in systems biology as it relates to interindividual variation, and research on new methodologies, informatics, and biostatistics, in the aforementioned areas.

Editor-in-Chief

Prof. Dr. Kenneth P.H. Pritzker

Department of Laboratory Medicine and Pathobiology, Department of Surgery, University of Toronto, 6 Queens Pk Crescent W.F, Toronto, ON M5S 3H2. Canada

Author Benefits

High Visibility:

indexed within Scopus, PubMed, PMC, Embase, and other databases.

Journal Rank:

CiteScore - Q1 (Medicine (miscellaneous))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 21.5 days after submission; acceptance to publication is undertaken in 3.5 days (median values for papers published in this journal in the first half of 2025).
