

## Special Issue

# Novel Biomarkers and Diagnostic Methods of Cardiovascular Disease

### Message from the Guest Editors

The understanding of cardiovascular diseases and their management has changed dramatically over the last 30 years with the identification of various pathways and the successful development of effective therapies that target them. This has led to a concomitant reduction in mortality and morbidity and an improvement in the functional capacity and quality of life of these patients. However, there are still major unmet needs in the management of these diseases; they continue to be the number one cause of death globally with the social and economic impact remaining largely unchanged. Therefore, it is of utmost importance to identify novel biomarkers and diagnostic methods through endeavors in basic research areas to better understand the disease mechanisms, identify novel biomarkers for early intervention, improved diagnosis, and experimental medicine for better disease management. This Special Issue in the *Journal of Personalized Medicine* will encompass both review and original research articles by experts in the field.

## About the Journal

### Message from the Editor-in-Chief

*Journal of Personalized Medicine* is one of the few journals that covers the diverse areas involved in the field, including research at basic, translational, and clinical levels. It focuses on “omics”-level studies that seek to define the basis of interindividual variation in susceptibility for a disease, its prognosis or definition of clinical subsets, and response to therapy (pharmacogenomics). We are also interested in systems biology as it relates to interindividual variation, and research on new methodologies, informatics, and biostatistics, in the aforementioned areas.

### Author Benefits

#### High Visibility:

indexed within Scopus, PubMed, PMC, Embase, and other databases.

#### Journal Rank:

CiteScore - Q1 (Medicine (miscellaneous))

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 25 days after submission; acceptance to publication is undertaken in 5.8 days (median values for papers published in this journal in the second half of 2025).
