

## Special Issue

# Frontiers in Pathogenesis and Therapeutics of Cancer

### Message from the Guest Editors

In cancer treatment, the ultimate goal is to offer accurate and personalized treatment according to the specific situation of patients. This Special Issue of the Journal of Personalized Medicine aims to explore the latest innovative treatments for all kinds of cancers, such as breast cancer, leukemia, endometrial carcinoma, and so on. Our goal is to demonstrate the scientific advances in this field and pave the way toward personalized medicine for treating cancers. In this Special Issue, original research articles and reviews are welcome. We are pleased to invite you to contribute studies using basic science, clinical, and population-based approaches, including, but not limited to:

radiotherapy

chemotherapy

immunotherapy

CART

immunotherapy

targeted therapy

cell therapy

## About the Journal

### Message from the Editor-in-Chief

*Journal of Personalized Medicine* is one of the few journals that covers the diverse areas involved in the field, including research at basic, translational, and clinical levels. It focuses on “omics”-level studies that seek to define the basis of interindividual variation in susceptibility for a disease, its prognosis or definition of clinical subsets, and response to therapy (pharmacogenomics). We are also interested in systems biology as it relates to interindividual variation, and research on new methodologies, informatics, and biostatistics, in the aforementioned areas.

### Author Benefits

#### High Visibility:

indexed within Scopus, PubMed, PMC, Embase, and other databases.

#### Journal Rank:

CiteScore - Q1 (Medicine (miscellaneous))

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 25 days after submission; acceptance to publication is undertaken in 5.8 days (median values for papers published in this journal in the second half of 2025).
