

Special Issue

Molecular Pathology of Cancer: The Past, the Present, and the Future

Message from the Guest Editor

I would like to invite you to contribute manuscripts for a Special Issue in the Journal of Personalized Medicine covering the past, the present, and the future of molecular pathology in oncology.

Molecular pathology is transforming clinical pathology and contributes to establishing a histopathological diagnosis and disease classification, provides prognostic information, identifies targets for therapy, and reveals mechanisms of resistance to therapy.

This Special Issue on the molecular pathology of cancer aims to provide an overview of different aspects of clinical molecular pathology and encompasses all oncologic and hemato-oncologic diseases. Contributions may address the description of the molecular mechanism of neoplastic diseases in association with their clinical utility, the role of molecular pathology in personalized oncology, laboratory techniques and assays in molecular pathology, bioinformatics, quality control, and potential ethical and legal considerations. Case reports, reviews, and original research articles are welcome.

About the Journal

Message from the Editor-in-Chief

Journal of Personalized Medicine is one of the few journals that covers the diverse areas involved in the field, including research at basic, translational, and clinical levels. It focuses on “omics”-level studies that seek to define the basis of interindividual variation in susceptibility for a disease, its prognosis or definition of clinical subsets, and response to therapy (pharmacogenomics). We are also interested in systems biology as it relates to interindividual variation, and research on new methodologies, informatics, and biostatistics, in the aforementioned areas.

Editor-in-Chief

Prof. Dr. Kenneth P.H. Pritzker

Department of Laboratory Medicine and Pathobiology, Department of Surgery, University of Toronto, 6 Queens Pk Crescent W.F, Toronto, ON M5S 3H2, Canada

Author Benefits

High Visibility:

indexed within Scopus, PubMed, PMC, Embase, and other databases.

Journal Rank:

CiteScore - Q1 (Medicine (miscellaneous))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 25 days after submission; acceptance to publication is undertaken in 5.8 days (median values for papers published in this journal in the second half of 2025).
