

Special Issue

Personalized Diagnosis and Treatment of Patients with Sepsis

Message from the Guest Editors

Diagnostics and therapy of sepsis still represent the "Holy Grail" of 21st century medicine. The aim of this Special Issue is to provide information on the current and potential use of personalized medicine in sepsis. Sepsis is a multifactorial clinical syndrome with an extremely dynamic clinical course, and is very diverse with respect to clinical phenotype. Early diagnosis is of crucial importance for the final clinical outcome. Previous studies have not identified a biomarker with sufficient sensitivity and specificity for the diagnosis of sepsis. Identification of the infectious agents or the use of molecular biology, next-gene sequencing has not brought significant benefits for patients in terms of early diagnosis. Therefore, we are currently searching for biomarkers, through "omics" technologies with sufficient diagnostic specificity and sensitivity, that are able to predict the clinical course of the disease, and patient response to therapy. Current progress in the use of systems biology technologies brings us hope that by using big data from clinical trials, such biomarkers will be found.

About the Journal

Message from the Editor-in-Chief

Journal of Personalized Medicine is one of the few journals that covers the diverse areas involved in the field, including research at basic, translational, and clinical levels. It focuses on “omics”-level studies that seek to define the basis of interindividual variation in susceptibility for a disease, its prognosis or definition of clinical subsets, and response to therapy (pharmacogenomics). We are also interested in systems biology as it relates to interindividual variation, and research on new methodologies, informatics, and biostatistics, in the aforementioned areas.

Editor-in-Chief

Prof. Dr. Kenneth P.H. Pritzker

Department of Laboratory Medicine and Pathobiology, Department of Surgery, University of Toronto, 6 Queens Pk Crescent W.F, Toronto, ON M5S 3H2, Canada

Author Benefits

High Visibility:

indexed within Scopus, PubMed, PMC, Embase, and other databases.

Journal Rank:

CiteScore - Q1 (Medicine (miscellaneous))

Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 25 days after submission; acceptance to publication is undertaken in 5.8 days (median values for papers published in this journal in the second half of 2025).
