

## Special Issue

# Postoperative Management in Vascular Surgery

### Message from the Guest Editor

Vascular disease treatment is currently an area of great innovation; we are currently at the threshold of a new era of minimally invasive approaches. However, despite the great potential development in the expert technical execution of operations and anticipation of complications, vascular surgery patients are still affected by serious postoperative complications. Early identification and management of these complications are essential to improve the overall outcome of these patients. This Special Issue of the *Journal of Personalized Medicine* aims to highlight the principles of postoperative care, complications, and their management in vascular surgery patients.

## About the Journal

### Message from the Editor-in-Chief

*Journal of Personalized Medicine* is one of the few journals that covers the diverse areas involved in the field, including research at basic, translational, and clinical levels. It focuses on “omics”-level studies that seek to define the basis of interindividual variation in susceptibility for a disease, its prognosis or definition of clinical subsets, and response to therapy (pharmacogenomics). We are also interested in systems biology as it relates to interindividual variation, and research on new methodologies, informatics, and biostatistics, in the aforementioned areas.

### Author Benefits

#### High Visibility:

indexed within Scopus, PubMed, PMC, Embase, and other databases.

#### Journal Rank:

CiteScore - Q1 (Medicine (miscellaneous))

#### Rapid Publication:

manuscripts are peer-reviewed and a first decision is provided to authors approximately 25 days after submission; acceptance to publication is undertaken in 5.8 days (median values for papers published in this journal in the second half of 2025).
